PRODIVER

Here at Stowa we not only create beautiful timepieces that are worn and treasured by our customers, we also provide them with a watch that is practical, durable and designed to do the job it was intended for.

With this in mind and the success of our robust seatime sports watch series, we decided we wanted to go one step further and produce the ultimate dive watch, a professional dive watch for divers. To make sure we got this watch just right we went to a designer who is not only a watch enthusiast, but who is also a very experienced diver with many years of experience.

The challenge was not only to create a watch that performed under extreme conditions and fulfilled divers needs, but also to create a beautiful watch that could be worn everyday and would be treasured by it's owner.

We like to think we have achieved this with our new seatime PRODIVER series.
