## MANUAL

Divingstar 'Poseidon Edition'

## Safety and Your DOXA

DOXA believes that nothing is more important than our customers welfare. With this in mind, please consider the following suggestions while enjoying your watch:

Diving can be hazardous sport. Use common sense when diving. Possessing a dive watch does not qualify you to be a diver. Please obtain the requisite formal training before diving. Please review your Scuba Diving Safety prior to each dive.

Please make sure that you understand how to operate the bezel on your watch before you rely on it as an essential piece of dive equipment. If you are unsure as to how the bezel functions, contact a dive instructor, our company office, our web site or alternatively, use a dive computer.

Keep your watch out of the hands of children. It may pose as a choking hazard or the edges may scratch or damage a child's sensitive skin.

Do not wear you DOXA SUB near machinery with moving parts that could snag or grab the watch.

In order to keep your watch working properly at all times please refer to your care and maintenance manual.

## Thank you for choosing a DOXA SUB 300T “Poseidon Edition”.

As watch enthusiasts as well as watchmakers, we know that there are many interesting watches to consider and we are glad that you made DOXA one of them. DOXA, which was founded in 1889, has a proud and rich heritage. DOXA watches have been worn on the wrists of divers, race car drivers and pilot. World famous author Clive Cussier, a 300T owner since 1968 gave an orange faced DOXA to his fictional action hero Dirk Pitt and we are proud to say that particular watch has helped save the world on numerous occasions.

We hope you enjoy owning your DOXA SUB 300T. Even if you are like us and your diving is limited to a pool, you do not fly your own plane, your racing consists of getting to work on time and you never save the world, we are confident that a DOXA will enrich your life and add to the adventures that come your way.

## OWNERS MANUAL

### GETTING STARTED

#### P1 NORMAL POSITION

(SCREWED-DOWN, NORMAL OPERATION)

Your **DOXA** is equipped with a screw-in crown that keeps your watch water resistant at depths up to 1000 meters/3300 feet. Please make sure the screw-in crown is screwed down before submerging your watch in water.

The SUB 300T is equipped with an automatic (self-winding) movement that is wound by the normal movement of your wrist.

Before you wear your **DOXA SUB 300T** for the first time (or after a long period of not wearing your watch), you will need to manually wind it to get it started. **IMPORTANT – NEVER** shake your self-winding watch to get it started. This can damage the movement.

#### P2 Winding Position

(for manually winding the watch)

#### To manually wind the watch:

Please unscrew the crown by turning it counterclockwise. It will gently "pop" when the crown has been completely unscrewed. The crown is now in Position 2 (P2). With the crown in Position 2 (P2) please gently turn the crown 30 - 50 times in a clockwise direction.

This will sufficiently wind the movement so that it has sufficient power to begin wearing. Now that you have manually wound the watch, your normal wrist and arm movements will continue to generate power reserve in the watch, literally "self-winding" it. When fully-wound, your **SUB 300T** should have an average power reserve of 42 hours.

#### P3 Date Setting Position

##### To set the date:

Gently pull the crown once to Position 3 (P3) and turn it clockwise to adjust the date.

In months with fewer than 31 days, you will need to manually advance the date at the end of the month.

**IMPORTANT** - Please do not manually change the date when the hour hand is between 10:00 PM and 2:00 AM. The automatic date function of the watch is actively engaged during this four hour period (the pinions are being repositioned to carry out the automatic date change), and by manually engaging the date while the hour hand in this four hour period it is possible to damage the self-winding movement.

## OWNERS MANUAL

### GETTING STARTED

#### P4 TIME SETTING POSITION

##### TO SET THE TIME:

Gently pull the crown to the outermost position (P4) and turn it counterclockwise until you have the correct time. Gently push the crown towards the case until you feel some resistance. Still gently pushing the crown towards the case, turn the crown clockwise (do not apply excessive force!), until the crown is fully screwed down and in Position 1 (P1).

#### IMPORTANT:

ALWAYS be sure that the crown is fully screwed down. Your watch will NOT be water-resistant if the crown is not completely screwed down and in position 1 (P1). Please note that improper use/operation of the crown will invalidate the warranty.

If for any reason you are unable to operate the crown of your watch - please contact AQUADIVE customer care immediately.

## OWNERS MANUAL

### BEZEL OPERATING INSTRUCTIONS

The dive bezel of the DOXA SUB diver watch series consists of an outer ring indicates the dive depth for a no decompression dive, an inner ring indicating the corresponding dive time and yellow decent marker.

### EXAMPLE:

For a 100ft/30 metres dive your no-decompression limit would be 25 minutes according to your dive table bezel.

#### A.

At the beginning of your decent rotate the bezel lining up the decent marker of the bezel with the minute hand.

#### B.

Assuming that the deepest position of your dive is at 100ft depth start ascending once the minute hand reaches the corresponding 100ft mark on the outer ring of the bezel.

The corresponding mark on the inner bezel will tell you that your no-decompression limit in this case was 25 minutes.

## OWNERS MANUAL

### WARRANTY

Your DOXA SUB has been manufactured using superlative materials and has been built to not only meet, but exceed the stringent Swiss quality standards.

Every DOXA SUB Re-edition model is covered by a 2 years (24 month) warranty effective from the original date of purchase. The warranty protects and covers the watch, and specifically **excludes** damage caused by accident, misuse, abuse or neglect by the owner. It also does not cover any improper or unauthorized service or repair.

This warranty does not cover the bracelet, or strap. The decision to repair or replace a watch belongs solely to DOXA.

Should your DOXA require servicing during this time period, your watch will be serviced and returned to you at no additional cost. You can rest assured that your DOXA is being taken care of by the people who created it.

In the unlikely event that your DOXA needs servicing during the warranty period, please contact our service team at [help@doxawatches.com](mailto:help@doxawatches.com), or by calling our toll-free number (877) 255 5017 and request an RMA form. PLEASE DO NOT send your watch without a completed and approved RMA form. You will be given instructions on how to package your watch for shipping and where to send it.

## OWNERS MANUAL

### SERVICE

All DOXA Re-edition models are covered by 24 month ship-in warranty, which means in case your watch needs warranty repair carried out within the period of 24 months from the date of purchase, your watch will be repaired, adjusted etc.. and returned to you at no extra charge, so you can rest assured that your watch is being taken care of by the hands who initially made it and know it best.

In case your watch needs repair, please contact our service team at [help@doxawatches.com](mailto:help@doxawatches.com) and request the RMA form.

Please do NOT send your watch without the RMA form. Please note that when you ship your watch back to DOXA that you have to state “repair” on the custom paper work. Please do NOT send the heavy original tube due to the high shipping costs involved.
